

AiM Webinar
“Determining Your Data Analysis Learning Style”
10.13.20
Edited Q&A

1 **Q:** I'm new to this stuff. Is there a starter video series? And where can I find it?

A: We have a two-part intro video specifically for getting people started with looking at data. It is called "I've Downloaded My Data Now What?". I would start there and once you have watched both of those it is just a matter of picking out which topics you want to learn first.

Part 1: <https://www.youtube.com/watch?v=gk4tjWfwhU>

Part 2: <https://www.youtube.com/watch?v=xnwAmaoocC8>

2 **Q:** What does the arrow down after “unconscious competence” mean?

A: [Answered live at 1:06:43]

3 **Q:** What field of view are you using in these examples? [At 43:10]

A: That's either going to be 84* or 67*. There is not a huge difference between the two, but I would say most likely 84* based on being able to see a good bit out of the side window.

4 **Q:** Can you import the Google Earth track image using RS2?

A: In RS2 you can export data in Google Earth format. RS2 does not have the ability to read satellite images. Check out our RS3 beta software with that feature built in.

5 **Q:** Can RS3 compare discrete end-of-brake points between laps on a track map?

A: Not currently but that is a feature we plan to have.
