

AiM Webinar
“Track Event Prep & Planning with AiM Data/Video”
10.08.20
Edited Q&A

1 **Q:** What about camber?

A: Here is a link to our Suspension Analysis video: <https://youtu.be/98Z4GB9NmSA>

2 **Q:** Since these units can be used on bikes, wouldn't the "lean" = road camber?

A: [Answered live at 16:43]

3 **Q:** In RS2A, can I change the data that shows the GPS map? I always have GPS_Speed, can I change that to Gear position or another channel?

A: Yes, click on the GPS Map and then select the furthest right icon in the toolbar. This will allow you to set any channel to show values on the GPS map.

4 **Q:** When downloading sessions from a Solo2 DL, is there a way to select driver names and vehicles that are already in the RaceStudio database?

A: In RaceStudio3 you can label this info for the logger prior to download. There is not a way to apply an existing label from a database. On RS3, when connected to the Solo2 DL, go to 'Devices', then under “Wi-Fi Properties” tab you can add driver name, etc.

5 **Q:** How do you add a heart rate monitor to an AiM system?

A: Reach out to Matt, he's got a set-up! www.trailbrake.com or matt@trailbrake.net

6 **Q:** Is max corresponding to max value or end of the lap?

A: [Answered live at 56:20]
