

AiM Webinar  
“Wi-Fi Tips & Tricks”  
3.23.21  
Edited Q&A

**1**      **Q:** What is the distance range of the Wi-Fi? What stops people from downloading competitor’s data?

**A:** The Wi-Fi range will depend on some conditions, but at least 50 ft. You can turn the Wi-Fi off or set a network password.

**2**      **Q:** So, you can setup a unit to connect with an existing network or to connect directly to a computer?

**A:** That is correct.

**3**      **Q:** It would be interesting to learn more about broadcasting back to the trailer from the race car.

**A:** As of right now, it is possible with some 3rd party devices, but not a native ability.

**4**      **Q:** Will my current Solo2 become obsolete if it relies on BlueGiga?

**A:** Certainly No, but fully [Answered live at 36:55]

**5**      **Q:** The ESP32 supports Bluetooth as well. Any plans to use Bluetooth in AiM devices?

**A:** [Answered live at 43:35]

**6**      **Q1:** Is there a way to add Wi-Fi capability to an MXL?

**A1:** No, not with the original MXL.

**Q2:** So, using a memory module with an SD card would be the best solution to quickly get data from devices like the Evo4 and MXL?

**A2:** Yes.

**7**      **Q:** Which USB standard is used in the loggers? (USB 2.0 or 3.0). What's faster, USB or Wi-Fi?

**A:** [Answered live at 50:23]
