Edited Q&A

1 **Q:** In RaceStudio2 Analysis, I am trying to use some math channels but for some reason I can only get them to apply to one lap. I have one of my recent laps up and the math channels work fine, but I have another driver's best lap up and when I try to apply the math channels, they don't end up on the graph for his lap. Thoughts?

A: Are you import the math channel into the other driver's test? When you create a math channel, you are doing so for that specific test. If you wish, you can use the add function to copy the channel into the smaller window, and either add it to the next session or to the general tab. The general tab has an option to auto insert into every test opened.

A: Here is a good video discussing the basic of math channels:

2 **Q:** How do you get the sector bars on the top of the data plots?

A: We covered that in one of our previous webinars which you can find here:

<https://youtu.be/f-4xPslj9M4>

3 **Q:** If I import a .drk file that I get from another user, the file isn't in my data folder. Is there a way to have RS2 pull the files into the folder structure when the test gets added?

A: You have to add files from another user into the file directory manually.

4 **Q:** If I move a .drk file such that the database can't find the file, can I recreate the link in the file path?

A: The file needs to be re-imported to create a new file location link.

5 **Q:** If you import someone's data and you don't like their "driver name" can you change it?

A: Yes. right click the data file in the test database then select 'test properties' to modify the driver name.

6 **Q:** Where do you change the vehicle settings?

A: Click 'File' in the top left corner, then select "vehicle" from the drop-down list.

7 **Q:** Can you sort by date?

A: [Answered live at 28:32]

8 **Q:** Can you re-name a test?

A: [Answered live at 30:05]

9 **Q:** Can I change the file naming convention and apply it retroactively to all files?

A: No, the changes will only be applied moving forward. You would need to change the files from previous sessions manually.

10 **Q:** I've worked with other software that includes a "car spec sheet" and allowed you to enter things like camber, caster, weight, etc. Any thoughts of adding something like this in RS3 Analysis.?

A: It is certainly possible, and I will make a note to our software team to consider it.

11 **Q:** Can top mph be sorted for each track?

A: Not in the current version of RS2A but RS3A will have this feature.

12 **Q:** Is the track name in the RS2 database the same as the track name that my MXG uses in RS3?

A: In RS2 Analysis, you create and name the track when you download the data or by editing it later, there is no link to the track name from our track database in RS3. RaceStudio2 Analysis will rely on your declared information when initialing saving.

13 **Q:** Can you add a .jpg or similar file to the "test notes" area? Is there a size limit to what you can add?

A: You cannot add images and the text of each note section is limited to 199 characters.

14 **Q:** What if the Throttle is 85% because there is a "stop" at that point?

A: [Answered live at 1:17:24]
